-

PROJECTS

Cancer Research

Under the supervision of Dr. Valerie Giordano at St. Joseph's University (2022-2023), research was conducted in order to investigate the anticancer properties of turmeric. To be more specific, plants like turmeric contain phytochemicals that have been shown to elicit apoptotic behavior relative to cancer cells. This research highlighted the effect of turmeric (or rather the phytochemicals contained within it) on breast cancer cell line MDA-MB-231 and its comparison to pancreatic cancer cell line PANC-1, through Coomassie protein concentration assays, growth and dose curves, dot blots, etc.
